## Case study on preprocessing

Do the following on titanic dataset

- 1. Load the dataset into python environment
- 2. Make 'Passengerld' as the index column
- 3. Check the basic details of the dataset
- 4. Fill in all the missing values present in all the columns in the dataset
- 5. Check and handle outliers in at least 3 columns in the dataset
- 6. Do min max scaling on the feature set (Take 'Survived' as target)

Give heading to each step you are doing Submit the .ipynb file in Paatshala Keep your name as the file name

Do not do regression
