Assignment on Python for Data Science

Do the following operation on Iris dataset:

1. Read the dataset to python environment

2. Display the columns in the dataset

3. Calculate the mean of each column of the dataset

4. Check for the null values present in the dataset

5. Perform meaningful visualizations using the dataset. Bring at least 3 visualizations.

Give heading for each step you are doing.

The filename of the code should be your name.

Submit the .ipynb file in Paatshala (jupyter/colab file).
